

In an effort to be consistent with other major Great Lakes events and accommodate wider rating spreads, the GLSS will be scoring all the Challenges using the PHRF Time on Time method instead of Time on Distance previously stated in Sailing Instructions #19.2.

The following formula will be used in Yacht Scoring when determining the final results:

$$TCF = 650 / (B + PHRF)$$

TCF is the Time Correction Factor which will be multiplied by each boat's finish time.

The **B Factor** can be adjusted by the Race Committee for actual race conditions as follows:

B Factor	When Used
480	Heavy air or all off the wind
550	Average conditions
600	Very light air or all windward work

Nothing needs to be done by participants as the current MWPHRF will be used as issued.
